

AWS Cloud Backup as a Service: Ensuring the Best Protection for Your Data

Data represent today’s most valuable asset. Data loss due to ransomware, accidental deletion, or natural disasters such as fires and floods can cripple organizations and cause financial as well as organizational difficulties. Therefore, your valuable data require secure backup. AWS Cloud Backup as a service provides flexible and scalable backup storage that will protect your data in a cost-effective manner.

Modern backup infrastructures require serious planning. Our experienced cloud experts can support you in the implementation, configuration, and operation of a secure hybrid backup infrastructure. This will enable you to back up your sensitive data, archive it and restore it in case of an emergency.

What does our service look like?

- Technical workshop (on-site or online) on the topics of storage in the cloud, cloud connectivity, hybrid cloud, and data protection
- Joint development of a target design and creation of a backup concept
- Creation, configuration, and implementation of AWS cloud storage using Commvault or Veeam
- Migration from physical to virtual tape drives in AWS (VTL)

Your advantages:

- AWS Cloud Backup as a service will give you more time to focus on your core business
- Your valuable data is in a safe place in the AWS cloud
- You will only be charged for actual read & write access as well as storage volumes used.
- Automatic scaling of cloud storage without any need for you to take care of it
- Implementation of the solution into an already existing backup infrastructure
- Optional: Operation and management on the UMB AWS Tenant is possible
