Assessments, Audits & ISO 27001: How Strong is Your Cyber Defense?

Do you know the maturity level of your cyber defense? How well prepared are you for a cyberattack? Conducting assessments and audits provides clarity and is important to improve your level of information security and minimize your risks. After a UMB security assessment, you will know your maturity and be able to make the right decisions.

Security assessments and audits provide clarity. They deliver information on how secure your organization is operating. In the case of audits in accordance with ISO 27001, 27002 and 27017, you will also gain clarity as to whether you are able to achieve these certifications or which aspects you are still lacking. This will strengthen the trust of your internal and external stakeholders and contribute positively to the reputation of your company.

Our services related to security assessments, audits & ISO 27001
—

Security maturity according to the NIST cyber security framework
The easy way to get started: Create certainty and learn about your cybersecurity maturity. We adhere to the NIST framework and will propose concrete measures to you.

Security audit according to the ISO 27001, 27002 & 27017 standard
The goal of a security audit is to identify and recommend potential improvements in the ISMS. We will help to implement these in order to increase information security in your organization.

GAP analysis regarding ISO 27001 certification
Our analysis and recommendations for action will help you improve your ISMS and increase the information security of your organization.

Individual security audits
ICustomized security audits are special audits tailored to the individual needs and requirements of an organization. They include the review of documents, processes, and systems, based on a tailored plan.

Offensive security – penetration test
How strong is your cyber defense? Our specialists will check this out in detail - according to a script which has been coordinated with you.

System and architecture review
We will conduct a detailed analysis and a review of systems, networks, and applications. Architecture, design, security concepts and measures as well as processes and procedures will be reviewed to identify weaknesses and improvement potentials.

Your advantages
—

- **Identification of risks and vulnerabilities:** We will help identify and prioritize risks and vulnerabilities in your organization's cybersecurity in order to develop measures to mitigate them.
- **Improving your security and cyber resilience:** We will help to close security gaps and improve your security.
- **Strengthening trust:** Audits and assessments demonstrate an organization's commitment to cybersecurity and strengthen trust with customers, partners, and stakeholders. This is especially important for companies that handle sensitive data or operate in regulated industries.
- **Compliance with laws and regulations:** We will review and ensure compliance with applicable laws and regulations.
