

Does Your SAP Provide Adequate Grip for the Digital Age?

The future belongs to SAP S/4HANA. However, the changeover to S/4HANA while still utilizing old systems may bring only limited productivity gains. That's why many users are biding their time. Why not use the system change to rethink your entire SAP basis and push ahead with digitization? SAP offers not only the S/4HANA platform, but with SAP Data unprecedented possibilities to push digitization with open interfaces in an agile way. Boost your own SAP productivity with UMB and Red Hat.

DATA SHEET

Challenge

Are you currently still running old UNIX or Windows environments? If so, moving to digitization will, in the long term, be a difficult and expensive process. SAP modernization in the course of SAP S/4HANA and the productive implementation of digital innovations pose several challenges. However, the beauty of it is that both can be combined.

Solution

With the migration to the Red Hat Linux platform you will gain the freedom to run S/4HANA on any (certified) hardware. This will work on premise as well as in the cloud. You will benefit from a fully automated operating system for SAP S/4HANA. The container platform will allow you to outsource SAP business processes and develop them in an agile way.

Benefits

The changeover to SAP S/4HANA only makes sense if it provides your company with a productivity gain. An enterprise container platform offers an agile and open way/platform to

connect your HANA to the fast moving world and react quickly to the needs of your business. This is the only way to enable technologies such as IoT, AI or machine learning. Create the conditions for a productivity boost now with Red Hat and UMB.

Your options in brief

The changeover to SAP S/4HANA only makes sense if it results in a productivity gain and new business requirements can be addressed. With an enterprise container platform you will benefit from the following advantages:

- Open platform: Only with this will you be ready for digitization.
- SAP and a container platform can boost your innovations.
- The possibility to work on premise, multi cloud or hybrid cloud.
- Open systems offer a wider choice of providers (hardware, cloud). This can also increase performance and reduce costs.
- You will benefit from a continually growing ecosystem.
