

How Mature Is Your Cyber Defense? The NIST Security Maturity Assessment Provides Clarity.

How well do you sleep when you think about your cyber defenses and the secure operation of your core processes and applications? How long could you survive without your IT services and processes? With the availability of artificial intelligence, the number of cyber attacks has increased massively. Smaller and smaller businesses are being targeted by hackers and cyber criminals. With our NIST Security Maturity Assessment, we analyze the maturity of your cyber defenses and provide clarity about your security situation.

Without proper defensive measures in place, cyberattacks can hit companies hard and bring them to the brink of ruin. Yet many organizations do not know exactly how good their cyber defenses are. This raises the following questions:

- How well do you know the maturity level of your security measures?
- How effective are your cyber defenses?
- Where can you achieve significant improvements to your security measures quickly and with minimal resources

The NIST Security Maturity Assessment provides clarity

Our NIST Security Maturity Assessment is based on the guidelines of the Swiss Federal Office for National Economic Development and the NIST Framework. We identify your specific security gaps and offer customized recommendations to significantly improve your resilience against cyberattacks. We want to sustainably increase your security and optimally prepare you for potential threats.

Scope of services: Maturity analysis according to BWL and NCSC recommendations	Standard
Kick-Off Call (1hour)	👍
Preparation, coordination and implementation of an on-site workshop (3 hours) with representatives of your IT, your business and, if applicable, your ICT service partner	👍
Analysis and documentation of the results	👍
Identification of gaps vs. NIST and the recommendations of the BWL and NCSC	👍
Development and documentation of recommendations and measures with prioritization according to your vulnerability	👍
Final presentation of the results and recommendations and delivery of the final report (1 hour)	👍
Costs	
Total CHF (excl. VAT)	CHF 5,900.00

Your advantages

- Our workshops are led by certified specialists such as CISO/ISO and CIO, who have many years of experience.
- You will benefit from an independent, external assessment that gives you a detailed insight into your risks and vulnerabilities.
- You will know your risks and vulnerabilities. Use our recommendations to improve your resilience.

«IT is a blessing. Until you are attacked ...»

The Security Angel ensures maximum IT security.
