

# UMB\_Device Management: So that your digital workplace is secure and ready for use wherever you are.

With increasing mobility, remote working and flexible working models, the number and variety of managed devices is growing rapidly. These devices must remain secure, up to date and available – regardless of location – without overburdening the IT department. This is precisely where our workplace experts come in.

Companies are struggling with a heterogeneous device environment, manual patch management, security vulnerabilities and high support costs. IT teams are wasting valuable time on routine tasks, whilst at the same time

demands for data protection, compliance and rapid response times are increasing. This leads to rising costs and declining user satisfaction.

## **Efficient, secure and scalable management of your digital workplaces**

With UMB\_Device Management, we provide a modern, centrally managed solution for your digital workstations – for Windows and macOS-based systems. The solution is based on a proven, standardised blueprint that ensures efficiency, security and scalability across the entire organisation. Thanks to zero-touch deployment, new devices are set up automatically: your employees receive pre-configured workstations that connect immediately and are ready for use straight away – whether in the office, working from home or on the move. It also enables a rapid response to security-critical incidents: devices can be locked or managed remotely immediately in the event of loss or theft. The implementation is professionally supported, including user guidance and support throughout the roll-out process.

Scope of services	Basic	Standard	Premium
Distribution of operating system and driver updates	👍	👍	👍
Regular updates to the default configuration	👍	👍	👍
Monitoring and auditing the security baseline	👍	👍	👍
Monitoring during deployment	👍	👍	👍
Proactive monitoring of the Intune environment		👍	👍
Management & Coordination Microsoft Security Patches		👍	👍
Verification of feature updates		👍	👍
Regular testing of enrolment		👍	👍
Proactive monitoring of drivers and firmware			👍
Customised testing of new client versions			👍
<b>Options (one-time)</b>			
Deployment of local caching servers (Apple / Microsoft) per operating system / per location			
Connecting network drives			
Connecting printers			
App Protection Policy - Mobile Application Management (iOS / Android)			
Configuring a wireless LAN with a certificate (PKCS/SCEP) <sup>1</sup>			

<sup>1</sup>A Certificate Authority is required

## Your advantages

### You remain in control at all times

All devices are managed centrally – policies, updates and security measures can be implemented consistently across all sites, with full transparency regarding effort and costs.

### They reduce effort, risks – and costs.

Automated processes take the strain off your IT department, minimise the need for manual intervention and reduce both security risks and operating costs.

### They ensure that devices are secure and ready for use – anywhere and on schedule.

Thanks to zero-touch deployment, new devices are up and running within minutes – without the need for time-consuming manual configuration by IT staff.

«If you don't go with time, time will go without you.»

### Modern Work Genius

Efficiency and innovation keep you one step ahead.
