UMB_Infrastructure Report: Keep an Eye on Your It's Operating Temperature at All Times. .

IT infrastructures are becoming more complex, and new features and updates are being released on shorter cycles. If you are still operating your systems locally, you are facing major challenges. With the UMB_Infrastructure Report, you are always aware of the operating status of your infrastructure. This ensures the highest quality of service and stability for your critical systems and frees up time for your core business.

Many organizations today are unable to regularly monitor the health of their IT infrastructure. They lack the resources or the expertise. Even if you have both, this time-consuming and tedious task is fraught with error potential. In addition, it is often difficult to see the connections and interdependencies between the various infrastructure components because of a lack of visibility.

When it comes to migrating existing on-premises infrastructure components to cloud services as part of due diligence or taking on operational responsibility for them, it is essential to have an overview of the operational status.

The UMB_Infrastructure Report provides you with insight
—

This is where the UMB Infrastructure Report comes in. The smart report documents all the classic basic infrastructure components (AD, DNS, SQL, RDS, Fortigate, etc.) including the associated log information and configurations. It also gives specific recommendations to improve security. In case of known errors, a specific solution is suggested. For systems that are not supported, the report can be created manually.

Scope of services	Basic	Standard
Report generation and delivery to the customer	👍	👍
Evaluation and discussion with a UMB expert		👍
System costs (one-off) incl. 1st report		
UMB_Infrastructure Report activation	CHF 190	CHF 190
System connection (e.g. Windows Server incl. services)	CHF 100/ system	CHF 300/ system
Connection of an extended system (e.g. SQL server, Fortigate)	CHF 200/ system	CHF 400/ system
Costs for each additional report cycle (e.g. semi-annual or annual)		
Price per system (Standard Windows Server incl. services)	CHF 50/ system	CHF 180/ system
Price per extended system (e.g. SQL server, Fortigate)	CHF 80/ system	CHF 250/ system

Your advantages
—

Get early warning of potential issues in your environment
We constantly monitor the configuration and logs of your systems.

Receive a clear report on your environment
You will get a clear report of your environment, with or without evaluation by our UMB experts.

Modular service
You decide which systems to check and how often. The only requirement: The systems must be supported by the service.

Our Supported Infrastructure Service
—

Windows Server Microsoft Active Directory FORTINET Microsoft Hyper-V

Exchange Microsoft SQL Server kemp Kemp Center Partner

20% Introductory discount until 30.09.2024 for > 10 systems
