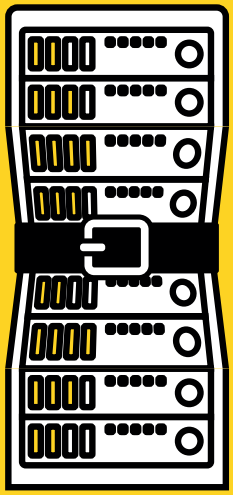
UMB_SAP Archiving Service: We streamline your database and get it ready for SAP RISE.

Data grows faster than budgets. A large, unchecked SAP HANA database drives up licence and operating costs, making migration to the SAP Private Cloud (SAP with RISE) unnecessarily expensive and time-consuming. With professional SAP archiving, we streamline and optimise your database before it moves to the cloud. In doing so, we ensure your compliance, reduce costs and create a cost-optimised and future-proof foundation for the further development of your core business.



SAP data accumulates over the years and becomes a cost driver

Over the years, SAP systems grow steadily: documents, material movements, IDocs, change documents and logs cause the database size to increase continuously – often without any immediate business benefit. When migrating to the SAP Private Cloud as part of RISE, this volume of data quickly becomes a cost driver: sizing, licences, backups, restores and release changes become more expensive and time-consuming. At the same time, data protection and audit requirements are increasing, for example due to the DSG, revDSG, GDPR and GoBD. These require the orderly storage, archiving and deletion of data.

Let our experts analyse, optimise and specifically streamline your existing database ahead of the SAP RISE migration. This will ensure you start your journey to the cloud with a clean, high-performing and cost-optimised foundation.

Comprehensive SAP archiving with UMB – ready for SAP RISE

With “SAP Archiving”, UMB provides you with a comprehensive package of technical, application-specific and organisational consultancy. Our experts have many years’ experience in SAP Basis and HANA technology, as well as in business processes within FI, CO, MM, SD, PP and HR. We analyse your database, work with you to define a bespoke archiving concept and implement the archiving runs in an audit-proof and traceable manner. The result is a noticeably smaller, more efficient and cost-effective SAP landscape – and a clearly planned path to the SAP Private Cloud.

Scope of services
Database analysis and growth (hot spots, large tables, indexes)
Development of an archiving strategy (technical and subject-specific)
Definition of retention periods (legal, tax and operational)
Selection and activation of archiving objects (FI, CO, MM, SD, PP, HR …)
Customising ADK, the filing system and interfaces
Integration with content servers or ArchiveLink (e.g. OpenText, KGS, Easy)
Carrying out archiving runs, including testing, verification and deletion runs
Reorganisation and downsizing of the HANA database
Support for audits, inspections and data protection (GDPR, revDSG)
Documentation, handover and training for the specialist departments
Additional options
Pre-check prior to SAP RISE migration (sizing and potential savings)
Introduction to Information Lifecycle Management (ILM)
Integration of external storage and cloud archives
Managed service for recurring archiving runs

Your benefits

Streamlined database prior to the Rise migration
We significantly reduce the data volume of your SAP HANA database. This noticeably lowers licence and operating costs in the SAP Private Cloud and shortens the migration time.

Compliance and Audit-proofing
We comply with Swiss and European regulations (OR, DSG, revDSG, GDPR, GoBD). Data remains available for auditing purposes without placing a burden on the production database.

A clear roadmap to SAP
With the Pre-Check, we highlight specific potential savings before migration. You’ll start your journey to the SAP Private Cloud with an optimised data foundation.
