

# UMB\_Secure Cloud Print Replaces Your Local Print Server.

Although businesses are using less and less paper, documents will still be printed in the future. As services continue to move to the cloud, integrating print services into the cloud is essential. This allows you to benefit from increased security and simplified administration - for both local and cloud-based services.

## Each client becomes an individual print server

Traditional print servers are a thing of the past. Today, every client is an individual print server. The challenge is to migrate printers and their queues to the cloud without disrupting the existing infrastructure. Organizations are often unable to meet this challenge due to time and technical constraints. Our cloud experts can do it for you.

## UMB Secure Cloud Print is flexible, scalable, and secure

UMB\_Secure Cloud Print was developed to enable seamless integration of print services into the cloud. This means that all printers currently operated via a local print server can be efficiently migrated to the cloud. Existing print queues and drivers are adopted on a one-to-one basis, so there is no need to set them up again. The cloud-based print infrastructure also offers the flexibility to scale as needed, both in terms of expansion and contraction.

Features overview	Standard
Centralized management of printers and users	👍
Hybrid cloud print	👍
Mobile print (Android und iOS)	👍
Secure Print	👍
Azure Virtual Desktop printing	👍
FollowMe (Printer must support this function)	👍
Monthly costs	
Monthly price per user	1.99 CHF

## Your benefits

### SaaS solution replaces local print server

Your local print servers can be completely eliminated. This removes all administrative tasks such as operating system maintenance, patch management, anti-virus management, VUM management, monitoring, and updating of printer drivers.

### Mobile printing

With UMB\_Secure Cloud Print, you can make internal printers accessible to mobile devices such as Android and iOS devices.

### Management options

The management dashboard gives you a complete overview of all print jobs, printers, sites, and users. You can also analyze print activity and import this data into a Power BI report. Your tenant is easily connected through the Azure Enterprise application.

«There is no such thing as a bad cloud. There is only bad consulting.»
